Research Interests

My research focuses on **embodied AI and robot learning**, building on **self-supervised and multimodal learning**. Recently, I have been studying how robots can adapt to new tasks and acquire reusable skills, focusing on **vision-language-action (VLA) model adaptation** and **agentic robot learning**.

Current Research

Wonjun Jo, Nam Hyeon-Woo, Yohan Park, Hyunwoo Ha, Tae-Hyun Oh, "When Fine-Tuning Drifts: Mitigating Policy Drift with Base Action-Field Regularization," ***Under review***, 2026.

- Mitigating policy drift for robust few-shot fine-tuning of pretrained robot policies.

Wonjun Jo, Yohan Park, Nam Hyeon-Woo, Tae-Hyun Oh, In So Kweon, "One-shot Teaching for Reusable Agentic Robot Skills," ***In progress***.

Peer-Reviewed Publications

[1] **Wonjun Jo**, Hyunwoo Ha, Kim Ji-Yeon, Hawook Jeong, Tae-Hyun Oh, "LiDAR-Anchored Collaborative Distillation for Robust 2D Representations," *IEEE Robotics and Automation Letters (**RA-L**)*, 2026. [Project Page] [Paper] [arXiv]

- Improving the robustness and generalization of self-supervised visual representations with LiDAR guidance.

[2] Yohan Park, Hyunwoo Ha, **Wonjun Jo**, Tae-Hyun Oh, "DarkQA: Benchmarking Vision-Language Models on Visual-Primitive Question Answering in Low-Light Indoor Scenes," *IEEE Robotics and Automation Letters (**RA-L**)*, 2026. [Project Page] [Paper] [arXiv]

- Benchmarking the robustness of embodied vision-language models under low-light conditions.

[3] **Wonjun Jo**, Hyunwoo Ha, Kim Ji-Yeon, Hawook Jeong, Tae-Hyun Oh, "Self-Supervised Collaborative Distillation: Enhancing Lighting Robustness and 3D Awareness," Workshop on Wild3D, *IEEE/CVF International Conference on Computer Vision (**ICCV**)*, 2025. [Paper] [OpenReview]

- Improving pretrained visual representations for lighting robustness and 3D-aware generalization.

[4] **Wonjun Jo**, Kwon Byung-Ki, Kim Ji-Yeon, Hawook Jeong, Kyungdon Joo, Tae-Hyun Oh, "The Devil is in the Details: Simple Remedies for Image-to-LiDAR Representation Learning," *Asian Conference on Computer Vision (**ACCV**)*, 2024. [Project Page] [Paper] [arXiv]

- Improving self-supervised image-to-LiDAR representation learning for robust 3D perception.

Research Experience

KIST Physical AI Research Intern — Seoul, South Korea
Korea Institute of Science and Technology (Advisor: In So Kweon) — *Jul. 2026 – Present*

POSTECH → KAIST Research Assistant — Pohang → Daejeon, South Korea
Korea Advanced Institute of Science and Technology (Advisor: Tae-Hyun Oh) — *Feb. 2022 – Present*
(lab moved to KAIST in 2025)

POSTECH Undergraduate Research Intern — Pohang, South Korea
Pohang University of Science and Technology (Advisor: Tae-Hyun Oh) — *Jun. 2021 – Aug. 2021*

Research Infrastructure & Robot Setup

KIST

- Led the purchase and setup of Franka Research 3 + Robotiq 2F-85 and Bi-Nero + Revo2 Touch.
- Currently run real-robot experiments on the Franka Research 3 setup.

POSTECH → KAIST

- Led the purchase and setup of GPU servers and storage/NAS systems at POSTECH and KAIST.
- Led the purchase of a Franka Research 3 and a Mobile ALOHA.

Education

POSTECH — Pohang, South Korea
Integrated M.S.-Ph.D. Program, Electrical Engineering (Advisor: Tae-Hyun Oh) — *Mar. 2022 – Present*

Inha University — Incheon, South Korea
B.S. in Computer Engineering — *Mar. 2018 – Feb. 2022*

Patents

Self-Supervised Learning Method Based on LiDAR-Anchored Collaborative Distillation 2026

- Republic of Korea. Application No. 10-2026-0177197 (filed Sep. 2026, pending).

Self-Supervised Learning Method, Computing Device, and Computer Program Through Collaborative Distillation Between 2D and 3D Encoders 2024

- Republic of Korea. Application No. 10-2024-0202291; Patent No. 10-2848095 (2025).

Self-Supervised Learning Method, Computing Device, and Computer Program Using Synchronized Sensor Data and Unsynchronized Sensor Data 2023

- Republic of Korea. Application No. 10-2023-0146900; Patent No. 10-2857995 (2025).

Selected Research Projects

Agentic Robot Learning — Jul. 2026 – Present

- Developed one-shot teaching methods for reusable agentic robot skills.
- Supported by the Korea Institute of Science and Technology (KIST).

Camera–LiDAR Self-Supervised Learning — Jan. 2023 – Dec. 2024

- Developed self-supervised methods for camera–LiDAR representation learning.
- Supported by RideFlux Inc.

Deformable Object Recognition — Mar. 2022 – Dec. 2022

- Developed recognition and motion estimation methods using multispectral images and LiDAR.
- Supported by the Agency for Defense Development (ADD).

Academic Service

Journal Reviewer

- The Visual Computer: International Journal of Computer Graphics (**TVCJ**), 2023

Conference Reviewer

- International Conference on Robotics and Automation (**ICRA**), 2023

Teaching Experience

Teaching Assistant, [EECE454] Introduction to Machine Learning, POSTECH, 2022
