Research Interests

Learning and adaptation for embodied agents through self-supervised and multimodal learning. I study adaptation of **pretrained robot policies** and acquisition of **reusable skills** from demonstrations and interaction, with interests in learning from failures, preserving prior capabilities, and generalizing to new tasks and environments.

Current Research

Wonjun Jo, Nam Hyeon-Woo, Yohan Park, Hyunwoo Ha, Tae-Hyun Oh, "When Fine-Tuning Drifts: Mitigating Policy Drift with Base Action-Field Regularization," ***Under review***, 2026.

- Mitigating policy drift for robust few-shot fine-tuning of pretrained robot policies.

Wonjun Jo, "One-shot Teaching for Reusable Agentic Robot Skills," ***In progress***.

Education

POSTECH — Pohang, South Korea
Joint M.S. & Ph.D. in Electrical Engineering (Advisor: Tae-Hyun Oh) — *Mar. 2022 – Present*

Inha University — Incheon, South Korea
B.S. in Computer Engineering — *Mar. 2018 – Feb. 2022*

Peer-Reviewed Publications

- Improving self-supervised image-to-LiDAR representation learning for robust 3D perception.

Research Experience

KIST Physical AI Research Scientist Internship — Seoul, South Korea
Korea Institute of Science and Technology (Advisor: In So Kweon) — *Jul. 2026 – Present*

- Purchased and set up two robot systems: Franka with a Robotiq gripper, and Bi-Nero with Revo2 Touch.
- Currently running experiments with the Franka-Robotiq system.

POSTECH → KAIST Research Assistant — Pohang → Daejeon, Korea
Korea Advanced Institute of Science and Technology (Advisor: Prof. Tae-Hyun Oh) — *Feb. 2022 – Present*

- Purchased and set up GPU servers and storage/NAS systems at POSTECH and KAIST.
- Purchased and set up a Franka arm and a Mobile ALOHA system with four Piper arms at KAIST.

POSTECH Student Internship — Pohang, South Korea
Pohang University of Science and Technology (Advisor: Tae-Hyun Oh) — *Jun. 2021 – Aug. 2021*

Selected Research Projects

Modular and Agentic Physical AI (KIST) — Jul. 2026 – Present

- Modular robot architectures linking perception, planning, and skill execution through agentic programming.
- Robust vision and tactile feedback for dexterous manipulation with high-DoF hands.
- Cooking as a testbed for long-horizon planning, task-state tracking, and precise bimanual manipulation.

Self-Supervised Learning Method Utilizing Camera-LiDAR Correlation for Autonomous Driving — Jan. 2023 – Dec. 2024

- Proposed a novel self-supervised learning method for improving 2D representation using LiDAR.
- Proposed remedies for improving self-supervised image-to-LiDAR distillation method.
- Funded by the RideFlux Inc., South Korea.

Deformable Object Recognition Technology Research — Mar. 2022 – Dec. 2022

- Developed deformable object recognition algorithm on multi-spectral images.
- Developed motion vector estimation algorithm for deformable objects using LiDAR.
- Funded by the Agency for Defense Development (ADD), South Korea.

Patents

Self-Supervised Learning Method, Computing Device, and Computer Program Through Collaborative Distillation Between 2D and 3D Encoders — 2024

- Republic of Korea. Application No. 10-2024-0202291; Patent No. 10-2848095 (2025).

Self-Supervised Learning Method, Computing Device, and Computer Program Using Synchronized Sensor Data and Unsynchronized Sensor Data — 2023

- Republic of Korea. Application No. 10-2023-0146900.
